BROOKSWRAPP™

SAY GOODBYE TO WOODPECKER DAMAGE.

Brooks Manufacturing is proud to announce the arrival of BrooksWrapp™. The power industry's most simple and effective woodpecker prevention tool on the wood pole market.

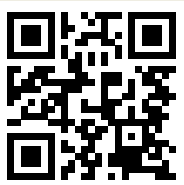

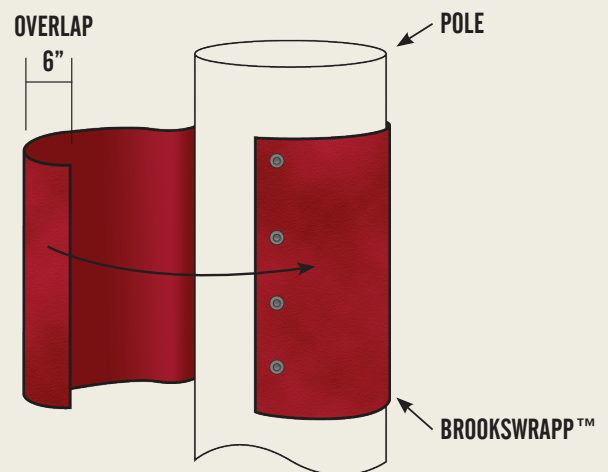

Designed to eliminate damage caused by woodpeckers, BrooksWrapp™ was developed out of a two part polyurea coating process. For some time, Brooks Manufacturing has been using this specialized coating to protect against woodpecker damage to distribution crossarms. Now with a simple all-inclusive kit, line crews can ensure that woodpeckers will not damage the pole itself.

Produced in 4x8 sheets, the BrooksWrapp™ product is easy to cut, requires no special handling and installs on the pole in minutes. BrooksWrapp™ has passed UL® 94 Horizontal Burn Test, is self extinguishing, and will not become brittle over time.

As for the recently deterred woodpeckers - while they may suffer hurt feelings, they will not be harmed in any way. The BrooksWrapp™ does not damage beaks or harm the woodpecker, it simply eliminates their ability to penetrate to the wood surface of the pole.

Simple and fast to install, BrooksWrapp™ can be applied at the first sign of woodpecker damage, saving valuable time and thousands of dollars.
